SPAX-M

for MDF boards

Secure connection of **MDF boards**

For special application on MDF boards and other thin-walled boards made of derived wood products.

- The specially designed *CUT point* ensures exact screw positioning.
- **SPAX typical ground serrations** for quick and secure fastening.
- Effectively reduces splitting and bulging of the MDF material when turning into thin or small surfaces.
- The screw's geometry allows MDF boards and thin chipboard to be screwed together without pre-drilling (wood-dependent).
- The slender head with the ribbed underside countersinks easily into the material.

Flat countersunk head, **T-STAR plus**

Small 75° milling head, *CUT point*, case hardened, slide-coated

SPAX

The flooring screw

The ideal screw for laying solid-wood flooring

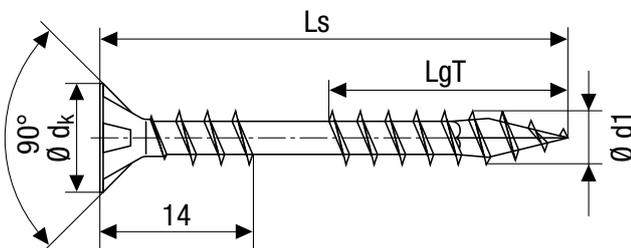

The flooring screw for OSB and chip boards with 4CUT and fixing thread minimises occurrence of creaking noises in the floor construction.

The SPAX flooring screw almost countersinks by itself thanks to the milled ribs on the head. In addition, the special T-STAR *plus* recess prevents the BIT from slipping, therefore ensuring an ideal distribution of the torque. The fixing thread allows a solid and permanent connection of two wood components. It effectively reduces creaking caused in the floor structure. The 4CUT minimises wood splitting.

The features

- **4CUT**
no pre-drilling (wood-dependent), its point effectively reduces the splitting effect. The square end pushes aside the fibre of the wood and reduces the screwing-in torque.
- **Ground serrations**
for quick and secure fastening.
- **Fixing thread**
allows safe and lasting connection of two pieces of wood.
- **MULTI Head**
flush countersinking. Mills in wood.

Flat countersunk head, T-STAR *plus*

4CUT, MULTI Head, fixing thread, case hardened, slide-coated

SPAX

for solid-wood flooring

The ideal screw for **solid wood floors**

SPAX for laying solid wooden flooring. Thanks to the special screw geometry including the *CUT point* material splitting is reduced effectively.

The characteristic screw point ensures an immediate grip, cutting ribs facilitate sinking, and the small milling head allows the **SPAX** to pull into the material in a particularly easy way.

The perfect connection of tongue and groove.

The features

- Lower screwing in torques, shorter screwing in times and stronger grips due to the ground serrations.
- The optimised head geometry ensures safe slot seat, high force closure and longer slot life.
- The high hardness of the thread edges and the ductile screw core allow powerful penetration into the material.

Flat countersunk head, T-STAR plus

Small 60° milling head, *CUT point*, case hardened, slide-coated
